Take pictures (both with front and back camera) directly from the application and share them instantly. These are the steps to follow: open WhatsApp Web on your iPad or Android tablet in the browser, enable "view as on computer" in WhatsApp on the mobile, tap on linked devices Scan the QR code displayed on WhatsApp Web with Mobile Wait to sync messages to wait for the official version WhatsApp for iPad and Android tablets takes time in development, according to rumors, if none of the previous options appeal to you, you will be waiting for you. Most importantly, it is a very easy-to-use tool that requires only a phone number to identify and very secure as it implements extreme end-to-end encryption for all communications. Most likely WhatsApp does not appear as an app compatible with your tablet on Google Play -stop if your tablet is relatively small, but even in this case you can always install the app from its APK file. Quote previous posts to answer a specific comment. This method has the advantage that you will have all the functionality of WhatsApp (it is literally the same app), but you cannot use the same account on your phone as well. Thanks to the instant messaging application par excellence, we are connected to our friends and family 24 hours a day from our smartphone. Logging into the Web version by pointing the phone camera at the QR that appears on your PC screen. Share gallery images, audio files, photos, videos, contacts, or location at an exact time or in real time. To do so, you must open the whatsapp web page in the browser and use the browser menu to see the desktop version, because otherwise you will only see a with information in whatsapp. Hundreds of emojis, stickers or gifs were added to conversations. There are dozens of bumper sticker packs and the Gif this includes a search engine inside the Giphy. Send an audio (voice notes) by pressing a button to record the necessary time. At the moment there is nothing confirmed, but the tendency feels that, with the advent of the new multidispositive mode, it is legal to use whatsapp on other devices without having to resort to tricks and with a more suitable interface to the big screen. Many other applications attempted to take it from their privileged position, but they all went to the street: nuse-chat, viber, line, telegram etc. We create status with text, photos, video and gifs that are displayed for 24 hours for all contacts or for those selected and then disappear. Set a profile photo to see all contacts and see from others. Downloading and installing your apk on our phone. Special Force on Android, we can access a whole communication ecosystem that goes from messages, calls, voice annotations and video calls, passing by sharing audio files, video and video or publication in states. Of course, WhatsApp LLC (Facebook, Inc.) does not like him very much and can sometimes interfere with complicating their use. Write individual calls, group or make complete encrypted calls and video calls. Silent groups to avoid discomfort for a certain period of time (8 hours, 1 week or always). We had to wait. Whatsapp is not officially available for tablets, although there are ways to use WhatsApp on a tablet or iPad in a fairly satisfied form. What's over about the latest version in this update - you'll find it on the removal of "diffusion lists" and "new group" in the list of chat, in a future update.
